

GALENA 6.00.2.03 and KeyClient Installation

KEYCLIENT:

You must have Keyclient (K2Client.exe) installed before installing this software!

This can be done by downloading Keyclient from our TIPS website (www.tips.osmre.gov).

To do this, click on the link: “Required new KeyClient now available!” under the “What’s new” section of the main page.

Make sure and check to see if you have a 32 or 64 bit machine so as to install the correct version of Keyserver.

Install Keyclient.

Restart your computer.

Go to the control panel, then, click on the KeyAccess icon.

In the Keyserver address, please type in: westls.osmre.gov

Click on the KeyVerify button. If a window pops up, and, it shows your status as “valid” you are ready to install GALENA!

GALENA:

GALENA is fully downloadable!

Before installing GALENA 6.0, uninstall all previous versions of GALENA.

Please click on the following link to download GALENA:

www.GalenaSoftware.com/outgoing/ks/GALENA60-KSSetup.exe

NOTE: You will need to contact Duane Matt (303-293-5072) or Lou Hamm (303-293-5061) and obtain a username and password to download the GALENA file.

Save the downloaded (GALENA60-KSSetup.exe) file to a temporary/empty directory (not a directory that already contains GALENA.)

Open/Run the downloaded (GALENA60-KSSetup.exe) file, which will proceed to Install GALENA 6.0 on the PC it is run from (you must have administrative rights to do this).

Restart your computer.
