

“Button” fix – uses regedit, so make sure you have permission on your computer, or contact your IT person.

The below instructions came from Autodesk support when the TIPS CAD Team put in a request:

Thank you for contacting Autodesk Support. Those buttons are part of the old status bar configuration and not available in Map 3D 2007 as it is out of the box. There is a registry edit that can be made to replace the new bar with the old, which will remove some 3D functionality (Exaggeration, 3d mode button). I have included the edit below should you decide you desire to do it:

1. Exit Autodesk Map 3D.
2. Open the Windows Registry Editor.

Warning! Problems caused by improperly editing the Windows registry could render your computer operating system unusable. Microsoft provides a wealth of critical information that you need to know about the registry in the Microsoft Knowledge Base.

Use the Microsoft(r) Registry Editor only at your own risk and only after backing up the registry as well as the system.dat and user.dat files as outlined for your operating system in the Microsoft Knowledge Base and in the related Autodesk solution, <http://support.autodesk.com/getdoc.asp?id=TS66513>. Additional information about the registry is also contained in the Help topics in the Microsoft Registry Editor.

3. Go to HKEY_CURRENT_USER\Software\Autodesk\AutoCAD\R17.0\ACAD-5002:xyz\Applications\AcMap (where xyz are numbers and characters that vary depending on the installed language version of Autodesk Map 3D).
4. Select AcMap and do a right click > New > DWORD Value.
5. Rename the newly created value to Statusbar.
6. As value enter 0.
7. Exit the Windows Registry Editor and launch Map.

To load the Autodesk Map 3D status bar instead of the AutoCAD one, set the Statusbar value to 1.

Note: You can't switch between the Autodesk Map 3D and AutoCAD status bar on the fly when Autodesk Map 3D is running.

Regards,

Dan Stover
