Tips for Installing CAD Software 2010 on Windows 7

All CAD software (and software updates) must be installed by an Administrator, and, then opened/run once by an Administrator using the right-click the program icon / "Run as Administrator" option...

The suggested sequence is:

1. Install Map and any updates (at least update #2) (logged in as Administrator)...
2. Run Map once (logged in as Administrator) using the right-click the program icon / "Run as Administrator" option...
3. Install Raster and any updates (logged in as Administrator)...
4. Run Raster once (logged in as Administrator) using the right-click the program icon / "Run as Administrator" option...
5. Install Carlson (logged in as Administrator)...
6. Run Carlson once (logged in as Administrator) using the right-click the program icon / "Run as Administrator" option...

Administrator should install any updates that the Carlson update program identifies on the first run...

If the process above is followed, the user should be able to open and operate any of the applications without being issued any special rights...
