PRODUCTION MAPPING

<http://www.tips.osmre.gov/Software/gis/GIS.shtml>

ESRI Production Mapping allows users to maximize the production of high-quality map products while using as few resources as possible. Through working in a shared environment enterprise, enhance the standardization and repeatability of a production process.

SELECTED FEATURES:

- Centralize GIS workflow management
- Standardization of feature collection and validation
- Standardize database development with templates

SOFTWARE:

ESRI Production Mapping

SMCRA BENEFITS/USES:

- Standardized dissemination of map products to field teams
- Consistency in deliverables to varied sources

TIPS TRAINING CLASSES:

- Introduction to ArcGIS for Mining and Reclamation
- ArcGIS Spatial Analyst for Mining and Reclamation

NEED HELP ????

The image displays three screenshots related to the ESRI Production Mapping workflow:

- Left Screenshot:** ArcGIS Workflow Manager interface showing a 'Job Queue Results - List View' table with columns for ID, Name, Assigned To, and Job Type. Below the table is a 'Job Properties' panel for a specific job.
- Middle Screenshot:** A workflow diagram showing steps such as 'Verify ADI', 'Create Data Update Job', 'View Map Product', and 'Close Job'.
- Right Screenshot:** ArcGIS Desktop interface showing a map of a mining site with various data layers and a 'Production Manager' dialog box.
