

DATA REVIEWER

Data Reviewer is a complete tool set for the quality assurance (QA) and quality control (QC) aspects of your GIS workflows. Data Reviewer allows the user to centrally manage all aspects of the QC process by finding, correcting and verifying errors through a variety of automated checks which analyze errors topology, connectivity, and database validation among others.

SELECTED FEATURES:

- Access pre-made batch jobs specific to your business from the ESRI Resource Center
- Track the users involved in reviewing and correct data to maintain a reliable chain of custody
- Create customized data review processes
- Maximize resources by performing data checks at off-peak times

SOFTWARE:

ArcGIS Data Reviewer

SMCRA BENEFITS/USES:

- Create processes to check the validity of mine database
- Check topology of fragmented mine permit boundaries
- Standardize the process for field-derived data inclusion and QA/QC into your GIS

TIPS TRAINING CLASSES:

- Introduction to ArcGIS for Mining and Reclamation
- ArcGIS Spatial Analyst for Mining and Reclamation
