Autodesk's Design Review

Autodesk's Design Review is a **FREE** software which provides tools to view, print, measure, mark up, and revise 2D and 3D designs—without the original design-creation software. Design Review's interface is limited to measurement and markup tools, which makes it is fairly easy to use and learn.

Features:

- **3D measure and markup** – All viewing and markup features are available for both 2D and 3D designs
- **Navigation tools.**
- **Find and locate designs** – Quickly find and locate design data in Design Web Format (DWF) files.
- **Customizable user interface** – The user interface can be customized to suit each user's needs.
- **DWFX file format** – Publish DWF files from any Autodesk application.
- **Geo-referenced DWF capability** – Ability to create a geo-referenced DWF from 2008 (or later) release of AutoCAD Map 3D, if the .dwg file has an assigned global coordinate system.
- **NMEA GPS antennae compatibility** – When a geo-referenced DWF is open, an additional toolbar appears, providing a variety of GPS tools (viewing coordinates, centering on your location, and locating you on the DWF).
- **DWG to DWF conversion** – When used with Autodesk's DWG TrueView software, Design Review will automatically convert DWG files to DWF when opening.
